Tone Software Expands Presence for ReliaTel and Streamline Solutions in European Market through Partnership with NuPSoft

NuPSoft to Market, Distribute and Support Tone Software's ReliaTel and Streamline Solutions for Managing and Monitoring Converging Voice Communications and IT Infrastructures

ANAHEIM, Calif., May 11, 2009—Tone Software Corporation, a global provider of end-to-end monitoring and management solutions for converged telecommunications and IT infrastructures, today announced a distribution and reseller partnership with NuPSoft, a leading provider of network service level management technologies to the European market. Tone Software's ReliaTel and Streamline solutions will expand NuPSoft's technology portfolio, providing strong capabilities to perform pre-network assessments that help clients determine their networks' readiness for voice over IP (VoIP). The combined technologies also provide NuPSoft's clients with in-depth management of faults, performance, quality of service (QoS), traffic, and network capacity for multi-platform, IP-enabled voice and data environments. For Tone Software, the partnership will expand its presence in Europe, providing an ideal partner for increasing its market share in the region, and on a global scale.

NuPSoft chose the ReliaTel and Streamline technologies for their ability to fully manage both the data and voice aspects of today's business driven networks. The combined solution platform provides critical support for multi-vendor, time division multiplexing (TDM) and IP voice environments, encompassing diverse technologies from many manufacturers—an important distinction needed to address the European mix of Avaya, Cisco, Siemens, Nortel, Alcatel-Lucent and other equipment manufacturers. ReliaTel and Streamline are platform agnostic, easily supporting any mix of technologies, and providing management benefits to clients at any stage of convergence—from the pre-net assessment stage, to the fully deployed, QoS and user experience management stage.

“As the impact of moving voice traffic over the data network grows, we recognize the need to provide deeper management technology that will address the unique challenges of the converged network,” said Fritz Neulinger, president and chief executive officer of NuPSoft. “As our clients migrate to IP-based voice technologies, the unmatched IP voice service and quality management capabilities of ReliaTel and

Streamline will ensure our customers achieve a smooth migration to VoIP across their corporate networks, while also successfully supporting their goal of optimizing data network performance and value.”

NuPSoft also intends to utilize ReliaTel’s data network management capabilities to support its customers’ current data network services, and as the bridging platform to manage customers’ IP voice services as they make the transition. As a result, these customers will be well positioned to accommodate VoIP or IP voice technologies as they are added and integrated, without replacing or reconfiguring their network management platforms. Consequently their transitions will be seamless, cost efficient, less disruptive and will provide higher return on investment.

“This partnership with NuPSoft enables Tone Software to greatly expand its exposure to a strong market of enterprises and service providers throughout Europe,” said Shirley Balarezo, president, Tone Software Corporation. “The combination of Tone Software’s robust technology with NuPSoft’s in-depth technical and software expertise will provide European enterprises and service providers with superior converged networking solutions that support key corporate initiatives in mobility, collaboration and unified communications.”

About Tone Software Corporation

Tone Software Corporation is a global provider of comprehensive network monitoring and management solutions for converged telecommunications and IT infrastructures. Tone’s ReliaTel and Streamline solutions provide managed service providers, value added resellers (VARs) and enterprises with a unified approach for managing and monitoring their entire converged voice communications infrastructure, supporting the industry’s leading devices, networks and environments from multiple vendors on multiple platforms. By unifying network management and monitoring in one solution, Tone Software eliminates the need for expensive, equipment-specific management hardware, software tools or vendor-specific monitoring services. The combination of ReliaTel and Streamline provide the ideal platform for managed service providers, VARs and enterprises who today must drastically reduce the overall costs of managing their current voice communications and infrastructure but who also require a management platform that will evolve to support future technologies and innovations.
